**Fully Portable**

**Easy Operation**

**Production Ready**

The CFP6 is designed for small to medium sized projects. It is ideal for a variety of architectural and decorative work. You can foam a yard of mixed slurry to 100 pcf density in about 10 minutes. Or you can foam a full truckload enough to improve workability in 8 to 10 minutes.

The CFP6 is a solid performer in which the foam and water are pre-mixed in the six gallon tank. The power unit includes a 115 volt compressor and Foamhead foam generation chamber. Supplied with a 20 foot long hose for versatility on a variety of projects. It has fifteen years of field proven foam generation performance. Rugged enough that you will use it for years to come. Weighs 65 pounds empty, easy to move wherever you need it. Produces about 20 cubic feet of foam per fill, also available with a 10 gallon tank.

Cellular concrete incorporates "shaving cream like" foam in a standard concrete mix to reduce density. Compression strength is reduced

*The CFP6 is a machine for you. It arrives ready to fill with water and foam concentrate, be plugged in and put to work. Dependable, easy to use, and economical.*
